WEATHER

WEATHER SYNOPSIS BY REGION:

NORTHERN CALIFORNIA

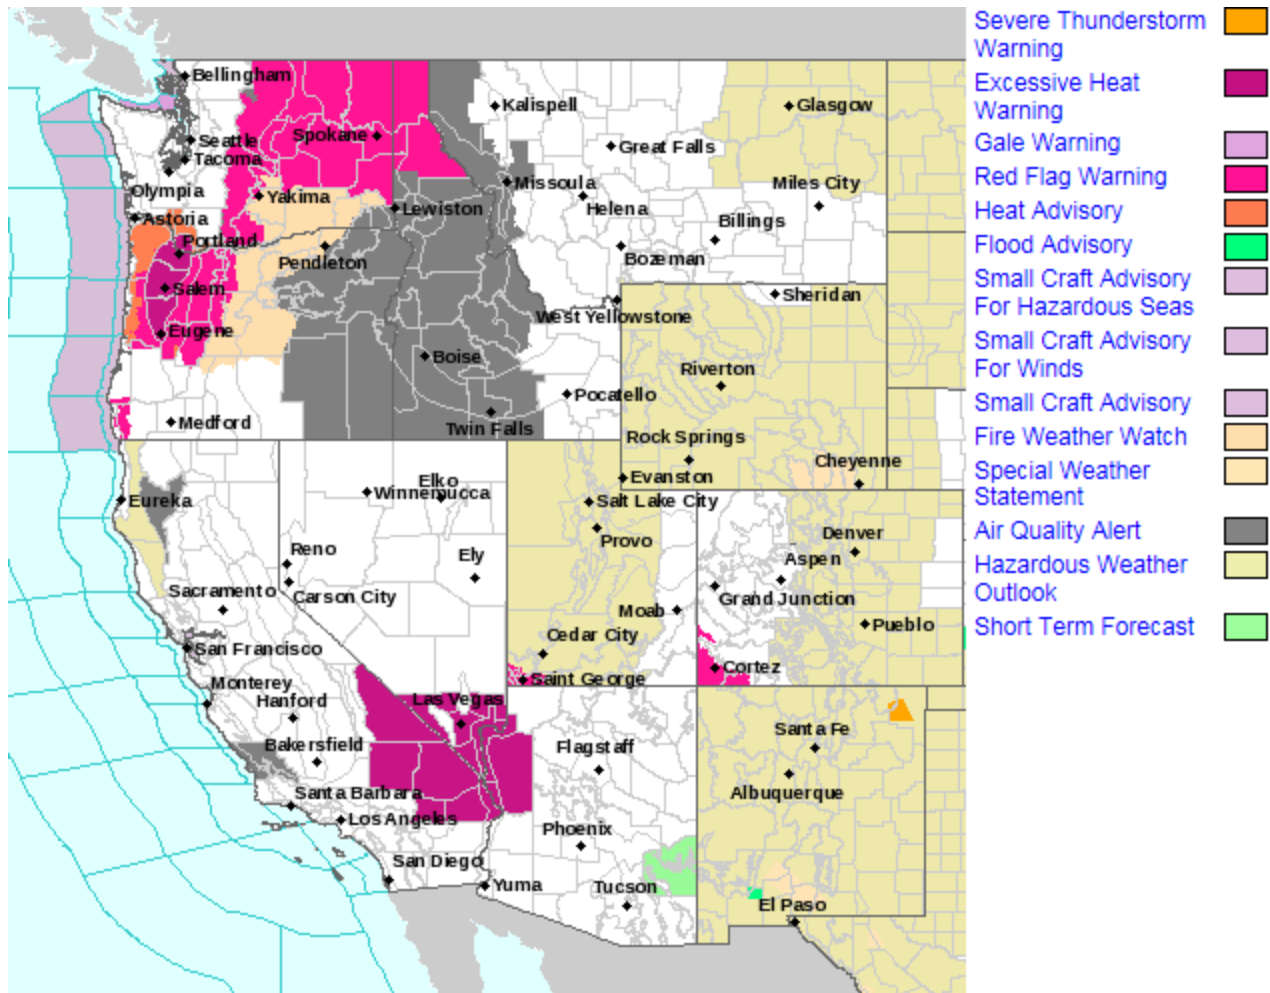

A strong ridge of high pressure aloft continues over Northern California through Wednesday keeping inland maximum temperatures at or near record levels. The drier portions of all inland Predictive Service Areas will also see another two days of single-digit minimum relative humidity along with poor to mediocre overnight relative humidity recovery. A fairly dry low pressure trough dropping southeast across the Pacific Northwest will weaken the California high pressure ridge a little bit on both Thursday and Friday. This will drop Northern California temperatures back to near normal Friday as well as help humidity to trend upward by at least several percent after mid-week. Generally minor improvements in overnight relative humidity recovery are also expected starting Wednesday or Thursday night. This morning had the last lingering locally moderate a.m. wind gusts out of the northeast to east-south-east as we wind down a pattern of several days duration. This afternoon through the middle of Thursday sees mainly just typical diurnal shifts in light differential heating-induced breezes. After stronger high pressure rebounds for the weekend, we expect a low pressure trough to slowly develop just off the Pacific coast next Monday afternoon through early Wednesday. It will bring some cooling again along with south to west-southwest gradient winds aloft and increased onshore low level flow. There currently appears to be only a very slight chance of isolated afternoon thunderstorms in the p.m. periods of Tuesday and/or Wednesday and if so, probably confined to the northwest quarter of Northern California.

SOUTHERN CALIFORNIA

A moderate onshore flow will lead to a gradual cooling trend which will continue through the end of the workweek. Expect high temperatures to drop a degree or two each day, and by Thursday and Friday, highs will be a bit below normal over most areas outside the deserts. Temperatures will generally run in the 70s along the coast, upper 80s to lower 90s in the interior valleys, 100-103 in the San Joaquin Valley and 105-110 in the low desert. Minimum relative humidity will be higher over many areas due to the influence of the marine layer, but higher elevations above 4,000 feet across Southern California will still see readings in the teens 4-6 hours each afternoon. The onshore flow will generate winds of 20-30 mph with gusts to 45 mph across the Kern County Mountains, Antelope Valley, Banning Pass and the eastern side of the Cleveland National Forest each afternoon and evening through Friday. Slightly warmer weather with less windy weather may return this weekend. There is a chance “monsoonal” moisture may make a return next Monday but until then, no thunderstorms are expected.

- Per SFM, Crimson stated that they do not have any tanks in the area. They receive crude oil from a production lease and ship it through a 6-8-inch gathering line (CSFM Line ID 0827). This line appears to be southeast of the fire but Crimson is sending a representative to the Lincoln Fire to inform the FD on scene.
- Additional production oil lines are in the area and the Department of Oil and Gas (DOG) reports that the main production oil field and production pipelines are owned by Freeport McMoran Oil and Gas, who they will be in contact with on Monday 08/17/15.
- Per the LA County OEM duty officer: Southern California Edison (SCE) reported that 66kV and 16kV lines have been damaged.
 - The California Utilities Emergency Association (CUEA) is in contact with SCE who reports that they are doing a work around to the damaged 66kV power line and there is no impact to the Grid.
- The fire caused SCE and privately owned oil drilling company downed power lines. About 60-160 residents are still experiencing power outages. SCE reported crews are in the area working on repairing the downed power lines and restoring power to the impacted residents.

CAL OES MISSIONS

Ongoing Cal OES Missions

- **2015-LAW-14555 08/03/15, 0800 hours, Update 8/12/15:** Several of the fires within the complexes have been merged, with one fire, the Pelletreau (South Complex Fire), being moved into the Route Fire Complex and merged into the Johnson Fire. Windy conditions and overstretched fire resources has necessitated LE to assist with dynamic road closures lasting up to an hour or so. Trinity County Sheriffs Office is in the process of coordinating with the 5 Fire Complex Security Managers to capture thefts of fire equipment and fuel. Currently thefts of Diesel (approx. 200 gallons), New Batteries, New Fire Engine Tires (4) and a Water pump have been reported. The water pump was one of 42 that were ordered for the fire, Fire was only able to secure 17 of these pumps so the loss of this pump has exacerbated this situation. **Update 8/14/15:** Significant increase in fire activity, no new LE issues. **Update 8/15/15:** No new significant information or changes in operational needs to report. **Update 8/16/15:** No new significant information or changes in operational needs to report. **Update 8/17/15:** No new significant information or changes in operational needs to report. A/C Baldwin deployed to relieve A/C Sutton. **Mission Ongoing.**
